Vedha

THE OPEN DOOR REPORT

Every office has one door nobody remembers.

What's open on India's office networks, and how to close it.

Stage 1 · India · [CONFIRM month] 2026 · vedhasec.com

SUMMARY

What this report shows

Stage 1 looks at the "doors" on office networks from three angles: what's visible from the internet nationally, what Vedha checks found inside real offices, and what owners know about CERT-In's new MSME controls.

Key numbers are added only when the data in Charts 1–3 is in. Each one will be quoted with its source and its n, and nothing will be rounded to change the story.

Every finding in this report comes with a fix (pages 6–7). This isn't a report about fear: most doors take an afternoon to close.

CHART 1

Internet-exposed services in India, by type

Unit: exposed services

Data pending

Source: Shadowserver Foundation (aggregate, country level), pulled [date]; credit line as agreed in #20

This chart is drawn only from that source. No numbers are estimated.

Source: Shadowserver Foundation (aggregate, country level), pulled [date]; credit line as agreed in #20

What anyone on the internet can see. These counts are services, not organisations; one office can have several.

CHART 2

What Vedha checks found inside offices, by type

Unit: offices with this finding

Data pending

Source: Vedha checks [dates], n = [offices]; aggregated under the data-use clause (#9 X.4)

This chart is drawn only from that source. No numbers are estimated.

Source: Vedha checks [dates], n = [offices]; aggregated under the data-use clause (#9 X.4)

What Vedha checks found inside offices. Aggregated across checks; no organisation, person or device can be identified.

CHART 3

Had you heard of CERT-In's 15 controls for MSMEs?

Unit: respondents

Data pending

Source: Vedha 15 Controls Awareness Poll (#18), n = [n], [dates]; not a random sample

This chart is drawn only from that source. No numbers are estimated.

Source: Vedha 15 Controls Awareness Poll (#18), n = [n], [dates]; not a random sample

Answers from an anonymous poll run through IT partners. Not a random sample; read it as a signal, not a census.

The doors, and how to close them

01

Remote desktop reachable from outside

Anyone who finds it can try to log in, all day, from anywhere.

Fix: Turn it off where nobody needs it. Where someone does, put it behind a VPN with MFA, and re-check.

02

File shares anyone on the network can open

Client files, payroll sheets and quotations, readable by any device on the Wi-Fi.

Fix: Give each share only to the people who need it. Remove "Everyone".

03

Databases that answer without a password

Billing and customer records readable by any device that asks.

Fix: Set authentication and let only the application server connect.

The doors, and how to close them

04

Admin pages for routers, printers and cameras

Settings pages left open from the inside, and sometimes from the internet.

Fix: Restrict admin pages to the IT person; switch off admin from the internet.

05

Cameras and DVRs exposed to the internet

"Remote viewing" set up by forwarding a port on the router.

Fix: Remove the port forwarding; view through the vendor app or a VPN.

06

Devices nobody can name

Old test servers, personal devices, forgotten boxes: unknown means unowned.

Fix: Keep an inventory of every device; remove what doesn’t belong.

METHOD, SOURCES AND LIMITS

How this report was made

- **Chart 1:** Shadowserver Foundation (aggregate, country level), pulled [date]; credit line as agreed in #20.
- **Chart 2:** Vedha checks [dates], n = [offices]; aggregated under the data-use clause (#9 X.4).
- **Chart 3:** Vedha 15 Controls Awareness Poll (#18), n = [n], [dates]; not a random sample.

Limits. Vedha checks cover office networks only, not cloud, and are run by IT partners with the owner's permission. Poll respondents chose to answer. This report doesn't claim any organisation is or isn't secure.

About Vedha. Vedha runs 7-day network health checks for growing businesses through IT partners they already trust: find what's open, prove what's real, show the fix worked.
